Philips Virtual Spectral CT Academy

At Philips, we see Spectral CT being an evolving technology where spectral information is available at all times for all patients and all examinations, empowering healthcare providers to utilise this technology routinely in their CT diagnosis.

This virtual workshop is aimed at existing and future users of Spectral CT. Participants will learn how to access and interpret the spectral information. Peer-to-peer case readings will be in a hands-on fashion, allowing participants to master interpretation for routine and practical clinical use. Clinical efficacy and advantages of spectral information will be demonstrated using local clinical case examples from Royal Brisbane and Women's Hospital.

Agenda (AEST)
